

The below two passenger comfort items have been approved for use on Alliance Airlines aircraft.

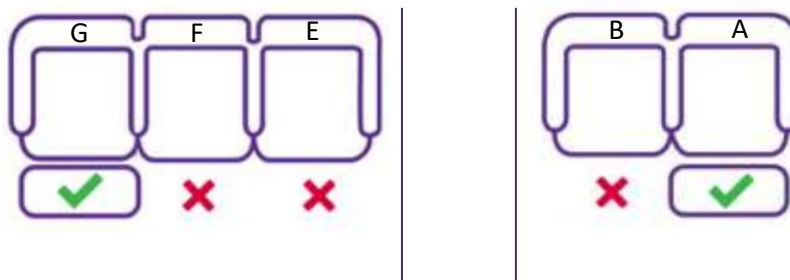

Jetkids Bedbox

1st Class Kids

Guidelines for use:

- Can only be used on a Fokker 70/100 aircraft at a window seat (seat A and G) (see diagram below)

- May not be used in an emergency exit row
- The item must be stowed for take-off, landing and during turbulence (can only be set up after the seatbelt sign has been switched off)
- If inflatable – the valve must face the aisle for easy inflation/deflation
- The child must be seated with a seatbelt fastened when the seatbelt sign is illuminated
- If the occupant is an infant – the infant must be secured using an infant seatbelt (ask your friendly Cabin Crew for an infant seatbelt upon boarding) whenever the seatbelt sign is illuminated
- Child/infant must be facing forward at all times (head must be against the seat back of their own seat)
- The device must not affect other passenger comfort or interfere with the seat in front or prevent it from reclining
- If attachment to the aircraft is required, the item cannot be used as it may cause damage to the aircraft
- There may be some rows where the item does not fit due to the configuration of the aircraft. In this case, it cannot be used.
